AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions and listings of claims in the application:

- 1-53 (cancelled)
- 54. (New) A method of producing collagen monomers comprising:
 - (a) providing microorganisms;
- (b) providing collagen-containing tissues obtained from animals selected from mammals, aquatic animals and avian animals;
- (c) allowing the microorganisms to ferment the collagen-containing tissues for a time sufficient to permit the production of a collagen composition weighing at least about 10% of the weight of the collagen-containing tissues, wherein the collagen composition comprises mostly collagen monomers which in an SDS-PAGE comprises predominantly α forms with a molecular weight of about 100 kDa;
- (d) solubilizing the fermented tissues by the addition of an acidic solution and an enzyme preparation;
 - (e) precipitating the mostly collagen monomers; and
 - (f) obtaining the precipitated mostly collagen monomers.
- 55. (New) The method of claim 54, wherein the enzyme preparation comprises pepsin.
- 56. (New) The method claim 54, wherein the precipitation is carried out by the addition of salt.
- 57. (New) The method of claim 54, wherein the microorganisms are grown for more than 24, 48 or 72 hours before fermenting the collagen-containing tissues.

- 58. (New) The method of claim 54, wherein fermentation is performed with agitation and aeration.
- 59. (New) The method of claim 54, wherein the collagen composition weighs at least about 50% or at least about 80% of the weight of the collagen-containing tissues.
 - 60. (New) The method of claim 59, wherein the low temperatures is at about 4°C.
- 61. (New) The method of claim 54, wherein the microorganisms comprise GRAS microorganisms
- 62. (New) The method of claim 54, wherein the microorganisms comprise bacteria or yeast.
 - 63. (New) The method of claim 62, wherein the bacteria are Gram positive.
 - 64. (New) The method of claim 63, wherein the bacteria are of the genus Bacillus.
 - 65. (New) The method of claim 54, wherein the mammals are porcine.
 - 66. (New) The method of claim 54, wherein the aquatic animals are fish or shark.
 - 67. (New) The method of claim 54, wherein the avian animals are chickens.
 - 68. (New) A method of producing collagen monomers comprising:
- (a) providing Gram (+) bacteria belonging to the genus *Bacillus* in a fermenter;
- (b) providing collagen-containing tissues from one or more of mammalian, aquatic, or avian animal sources;
- (c) allowing the bacteria to ferment the collagen-containing tissues at about 10% w/v to about 40% w/v in the fermenter for a time sufficient to permit the production of a collagen composition weighing about 20% to about 40% of the weight of the collagen-containing tissues, wherein the collagen composition comprises mostly

collagen monomers which in an SDS-PAGE comprises predominantly α forms with a molecular weight of about 100 kDa;

- (d) solubilizing the fermented tissues at about 1% w/v to about 50% w/v in an acidic solution of about 0.5M acetic acid (pH 3.0) with pepsin provided at about 0.2% w/v to about 5% w/v at low temperatures;
- (e) adding salt to the acidic solution sufficient to precipitate collagen and keeping it undisturbed overnight; and
 - (f) obtaining the precipitated mostly collagen monomers.
- 69. (New) The method of 68, wherein the collagen-containing tissues are fermented in the fermenter for about 18 hours to about 48 hours.
- 70. (New) The method of claim 69, wherein the collagen-containing tissues are fermented at about 10% w/v in the fermenter for about 24 hours.
- 71. (New) The method of claim 69, wherein the acidic solution is about 3% w/v of about 0.5M acetic acid (pH3.0) with pepsin provided at about 0.4% w/v to about 2% w/v and further comprising stirring for not more than about 48 hours when solubilizing the fermented tissues in the acidic solution.
 - 72. (New) The method of claim 71, wherein the mammalian source is porcine.
- 73. (New) The method of claim 70, wherein the acidic solution is about 3% w/v of about 0.5M acetic acid (pH3.0) with pepsin provided at about 1% w/v and further comprising stirring for about 48 hours when solubilizing the fermented tissues in the acidic solution.
 - 74. (New) The method of claim 73, wherein the avian source is chicken.
- 75. (New) The method of claim 54 or 68, wherein (a) and (b) are conducted simultaneously or sequentially, in either order.
 - 76. (New) The method of claim 68, wherein the low temperatures is at about 4°C.
